Secure Access Service Edge

Reduced Cost | Application Control | Unified Security Suite

At a Glance

A hybrid workforce has become the new reality for most organizations. The growing number of remote users & new network edges with multi & hybrid cloud application deployments requires a well architected security layer.

A Secure Access Services Edge (SASE) architecture converges networking and security, enabling secure access and high-performance connectivity to users anywhere.

SASE empowers organizations to grant per-user and per-session secure access to web, cloud, and applications regardless of where they have been deployed, combined with fully integrated enterprise-grade security.

Key Benefits

- Unified Security Suite
- Consistent Security
- Superior User Experience
- Simple Management
- Easy Scalability
- Enhanced Network Visibility
- Application-Level Control
- Remote End Point Agents

Product Overview

Garaj SASE approach empowers organizations to consistently apply enterprise grade security and superior user experience across all edges converging networking and security across a unified operating system and agent.

SASE enables Secure Web Gateway (SWG), Universal Zero Trust Network Access (ZTNA), next-generation dual mode Cloud Access Security Broker (CASB), Firewall-as-a-Service (FWaaS), and cloud-delivered SD-WAN connectivity that allows organizations to shift from a CAPEX to an OPEX business model while significantly lowering overhead and improving user experience and protection. With seamless convergence between security and networking, SASE ensures that the same level of protection, visibility, and user experience is extended to every user, anywhere.
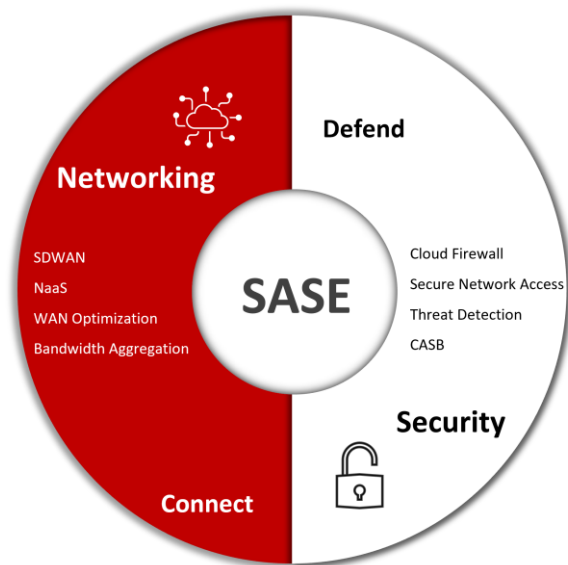

The Garaj Advantage

Local Support	Managed Services	NOC Device Monitoring	Dedicated Account Manager
Central Mgmt. Cloud	Local Currency Billing	Easy Scaling	Opex Based Billing Model

SASE Use Cases

Secure Internet Access	Secure Private Access	Secure SaaS Access
Application Visibility	Access Control	WAN Optimization
