

Virtual Data Center

Greater Flexibility | More Control | Less Complexity

At a Glance

A virtual data center is a pool or collection of cloud infrastructure resources specifically designed for enterprise business needs. The basic resources are the processor (CPU), memory (RAM), storage (disk space) and networking (bandwidth). It is a virtual representation of a physical data center, complete with servers, storage clusters and lots of networking components, all of which reside in virtual space being hosted by one or more actual data centers.

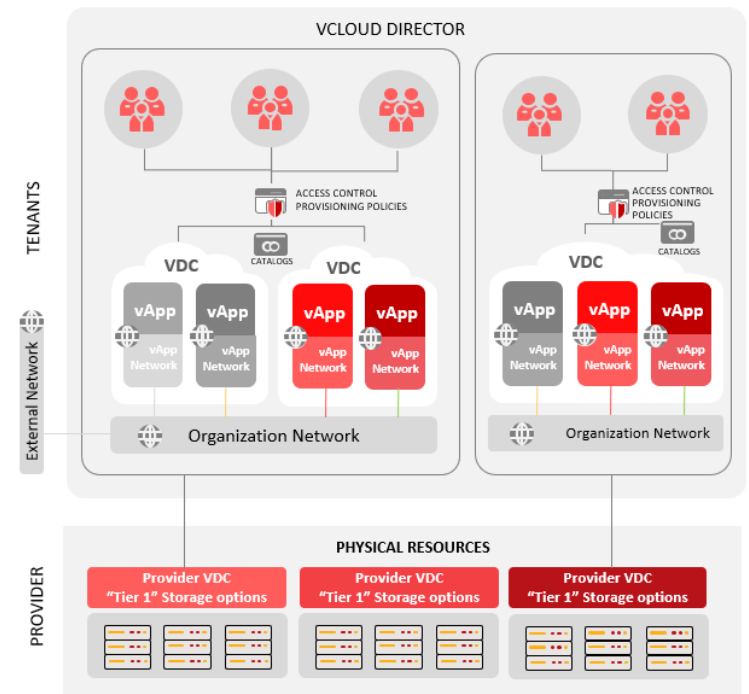

Key Benefits

- Cost Efficiency
- Flexibility & Scalability
- Simplified management
- Security & compliance
- Resource utilization optimization
- Agility & rapid provisioning
- Reliability & high availability
- Performance & sustainability
- Disaster recovery & business continuity

Product Overview

Virtual Data Center provides pool of cloud infrastructure resources (Compute, Memory, Storage, and Bandwidth), that are available on demand and are designed according to business's needs. Re-adjust your resource allocations, apply network and security policies through a management portal within your environment at any time, and make the data center services curated to your needs.

VDC is completely isolated and multi-tenant, to be used by enterprises to create, configure, manage and operate VMs; and networks policies to deploy different applications.

The Garaj Advantage

Local Support

Managed Services

Local Availability Zone

Dedicated Account Manager

Intrinsic Security

Local Currency Billing

Onshore Data Residency

Uncapped Traffic Data

VDC Use Cases

Enterprise Applications
(ERP/CRM/HRMS)

Development &
Testing

Banking/ Financial
Applications

DevOps & K8

Big Data Analytics

Web Applications
