

1. What is GarajCast CMS?

GarajCast is a cloud-based content management system that turns any screen into a smart digital signage solution. It allows users to remotely manage, schedule, and display content in real time—whether it's for branding, promotions, information, or live updates.

2. What types of content can I publish using GarajCast?

You can publish images, videos, OTT streams, live RSS feeds, branded messages, and ticker text using the in-app editor and content tools.

3. Does it support multiple screen types and sizes?

Yes, GarajCast supports any android enabled screen.

4. Can I schedule content in advance?

Absolutely. GarajCast enables automated scheduling so content updates in real-time based on your planned calendar, with minimal manual intervention.

5. Can I manage multiple screens from a single dashboard?

Yes. The platform supports simultaneous control of multiple devices, locations, and screen groups from one centralized interface.

6. Is there an in-app content creation tool?

Yes. You can create content directly within the CMS using built-in tools like the ticker editor, content creator, and VOD integration panel.

7. Does GarajCast support offline playback?

Yes. Content is cached on the display devices, allowing playback to continue even when internet connectivity is temporarily lost.

8. Is GarajCast secure?

Security is a core focus. The system uses secure protocols and access controls to protect your content and data across all connected screens.

9. Can it be integrated with other systems or analytics tools?

Yes. GarajCast supports integration with business tools and analytics platforms for reporting, campaign tracking, and content performance analysis.

10. Who can use GarajCast?

The solution is tailored for businesses across various industries including retail, hospitality, education, healthcare, government, and banking—anywhere dynamic communication is needed on screens.
