Web Application Firewall

Modern App Security with Point-and-Click Simplicity

At a Glance

Web application firewalls (WAFs) are intended to protect businesses from web app attacks and proactively prevent threats. Yet, despite the potential security benefits, 90% of organizations find it complex to implement WAF solutions due to complex rules, cumbersome scalability and lack of visibility or intelligence to model attack behavior.
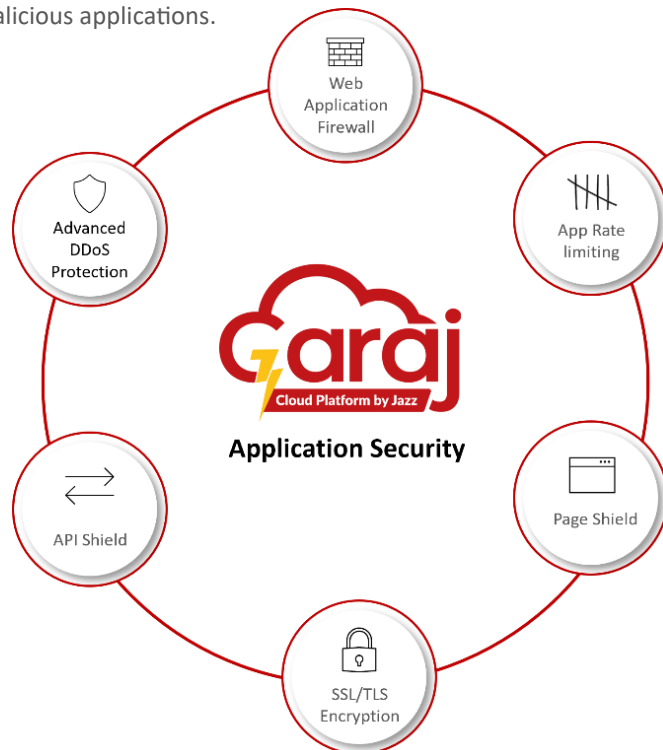

Key Features

- Point & Click Policy
- Real time visibility
- Application Rate Limiting
- L7 Firewall/DDoS Protection
- User Authentication/Authorization
- SSL/TLS Auth/Encryption
- Multi-cloud Elastic Fiber
- Centralized Management
- Automation & Programmability
- Automated Threats Updates
- On Demand Autoscaling
- Guided False Positive Mitigation
- OWASP Top 10 Attack Prevention

Product Overview

A web application firewall (WAF) provides web application security for online services from malicious security attacks such as SQL injection, cross-site scripting (XSS). WAF security detects and filters out threats which could degrade, compromise, or expose online applications to denial-of-service (DoS) attacks. WAF security examines HTTP traffic before it reaches the application server. They also protect against unauthorized transfer of data from the server.

WAFs can be built into hardware appliances, server-side software plugins, or filter traffic as-a-service. WAF security protects web applications from malicious endpoints and are essentially opposites of proxy servers (i.e. reverse proxies), which protect devices from malicious applications.

The Garaj Advantage

Local Support	Managed Services	Dedicated Account Manager
Flexible Packages	Local Currency Billing	Onshore Data Residency

WAF Offerings

Product Features	Packages		
	Standard	**Advanced**	**Premium**
Role-based Account Control	●	●	●
Fast, Easy-to-use DNS	●	●	●
Unmetered DDoS Protection	●	●	●
CDN	●	●	●
Universal SSL Certificate	●	●	●
Free Managed Ruleset	●	●	●
Web Application Firewall (WAF)	●	●	●
Lossless Image Optimization		●	●
Accelerated Mobile Pages		●	●
PCI DSS 3.2 compliance			●
Uptime SLA		100%	100%
Single-Sign-On (SSO) Support			●
Network Prioritization			●
Page Rules	20 Page Rule	50 Page Rule	125 Page Rule
Bot Mitigation			●
Layer-3 Network DDoS protection with Magic Transit			●
China Network Access			●
